

Question 1 — Science (5 marks)

The question asks us to explain how a simple electric circuit works and to illustrate the explanation with a properly labelled circuit diagram. This is a very important topic in physics and it is used in many places in daily life, such as in homes, in schools, in offices and in industries. Without circuits, modern life would not be possible at all.

A simple electric circuit consists of several components. These components include a battery, a switch, a bulb, a resistor, an ammeter and a voltmeter. Each of these components has its own function and all of them are important. If any one of them is missing the circuit will not work in the proper way.

1.3

The current flows in the circuit and this flow of current is what makes the bulb glow. The battery is the source of the electricity. The switch is used for switching. The resistor is used for resistance. The

ammeter and the voltmeter are the measuring instruments of the circuit and they are used for

measurement purposes.

Therefore we can conclude that a simple electric circuit is a very useful arrangement and all the components must be connected properly for the circuit to work correctly.

1.5

Fig 1 — Circuit diagram

Feedback: The explanation is lacking depth and the description does not mention the direction of the conventional current. They are connected in a series path in series. Correction: The answer should explicitly state the direction of the current flowing from the positive terminal of the battery to the negative terminal in a single closed loop.

Question 2 — English (5 marks)

Technology has made information easier to access, but easier access to information does not necessarily mean better learning. This statement is a very important statement and it makes us think deeply about the role of technology in the field of education in the present day scenario.

2.3

There are two sides to every coin. On the one hand, technology is very useful and helpful for the students. On the other hand, technology can also be harmful if it is not used in the correct manner.

Different people have different opinions about this matter and both the opinions have their own value.

2.4

Many students today are using technology for their studies. They use mobile phones, laptops, tablets and computers. All of these devices are very advanced and they contain a lot of information which was not available to students in the earlier times.

Correction: Use examples to illustrate a point, such as how using a calculator might hinder basic

maths skills (dependency) versus how online libraries expand research capabilities (better learning).

In conclusion, I would like to say that technology is a double edged sword and students should use it wisely and carefully for their own benefit and for the benefit of society as a whole.

Feedback: The student takes a neutral stance by calling technology a "double edged sword", but does not provide a clear, detailed position on whether it makes students better learners or more

Feedback: A conclusion is provided, but it is generic and does not follow from a detailed

discussion; the original discussion took place in the body of the response.

Correction: The student should clearly argue for one side or provide a nuanced position on the

Feedback: The student should use short, simple and clear arguments made in the response and

provide a final reasoned judgment.

The table given in the question shows the price of the product and the quantity demanded and the quantity supplied at each price. We have to draw the demand and supply graph using this data and then explain what the graph tells us about the market.

From the graph we can see the demand curve and the supply curve. The demand curve is showing the demand and the supply curve is showing the supply. Where they meet is a very important point in economics and it tells us a lot about the market condition.

3.4

The market is affected by many factors such as the price, the cost of production, the behaviour of consumers and the behaviour of producers. All these factors together decide what happens in the

market at any given time.

Correction: Explain that an increase in production costs makes production less profitable,

shifting the supply curve to the left/upward.

GradeSense — Student Answer Script

Zoya Farooqui · Roll No. S-2026 · Page 3

Fig 2 — Graph of demand and supply

Feedback: The student correctly represents the axes, the demand (D) and supply (S) curves, and the equilibrium point (E).

Question 1

Explain how a simple electric circuit works and illustrate your explanation with a properly labelled circuit diagram showing a battery, switch, bulb, resistor, ammeter and voltmeter. Your answer should explain how the components are connected, the path followed by electric current, and how changing the resistance affects the current flowing through the circuit.

1.5 / 5

PARTIAL

0.5 / 1

1.1 Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

MODEL ANSWER

A properly labelled diagram would therefore show the battery connected to the switch, resistor, bulb and ammeter in a single closed loop

STUDENT WROTE

"Fig 1 - Circuit diagram Switch (S) Resistor R Bulb A Ammeter (across the wire) Battery + - V Voltmeter (parallel across bulb)"

WHY THIS MARK

The student lists the required components for the circuit, but the description of the diagram does not explicitly confirm that they are connected in a closed series path.

CORRECTION

The answer should explicitly state or show that the battery, switch, resistor, bulb, and ammeter are connected in a single closed loop.

PARTIAL

0.5 / 1

1.2 Correct placement of ammeter in series and voltmeter in parallel across the bulb

MODEL ANSWER

The ammeter must be connected in series because it measures the current flowing through the circuit. A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

STUDENT WROTE

"Ammeter (across the wire) Battery + - V Voltmeter (parallel across bulb)"

WHY THIS MARK

The voltmeter is correctly placed in parallel. However, the placement of the ammeter is described as 'across the wire', which is ambiguous and does not clearly state it is in series.

CORRECTION

The ammeter must be explicitly connected in series within the circuit loop to measure current.

PARTIAL

0.5 / 1

1.3 Correct explanation of current flow and the function of the main components

MODEL ANSWER

A simple electric circuit provides a closed path through which electric current can flow. The battery provides the potential difference that drives current through the circuit. The switch is used to open or close the circuit.

STUDENT WROTE

"The battery is the source of the electricity. The switch is used for switching. The resistor is used for resistance."

WHY THIS MARK

The student provides very superficial descriptions of the components' functions and fails to explain how the circuit works as a closed path driven by potential difference.

CORRECTION

Explain that a circuit is a closed path and that the battery provides the potential difference necessary to drive the current.

MISSING

0 / 1

1.4 Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

MODEL ANSWER

According to Ohm's law, $V = IR$. If the voltage of the battery remains constant and the resistance is increased, the current flowing through the circuit decreases. Conversely, reducing the resistance allows more current to flow.

WHY THIS MARK

The student did not explain the relationship between resistance and current or mention Ohm's Law.

CORRECTION

Include a discussion of Ohm's Law ($V=IR$) and explain that increasing resistance decreases current if voltage remains constant.

INCORRECT

0 / 1

1.5 Clear, logically structured explanation with appropriate labels and current direction in the diagram

MODEL ANSWER

The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

STUDENT WROTE

"Fig 1 - Circuit diagram Switch (S) Resistor R Bulb A Ammeter (across the wire) Battery + - V Voltmeter (parallel across bulb)"

WHY THIS MARK

The explanation lacks logical depth, and the diagram description does not indicate the direction of the conventional current.

CORRECTION

The answer should show the current flowing from the positive terminal of the battery to the negative terminal.

Question 2

"Technology has made information easier to access, but easier access to information does not necessarily mean better learning." Discuss this statement in detail. Write a well-structured response explaining whether you believe technology makes students better learners or makes them dependent on easily available answers. Support your argument with relevant examples, consider an opposing viewpoint, and conclude with your own reasoned opinion.

2 / 5

PARTIAL

0.5 / 1

2.1 Presents a clear position on whether/how technology affects learning

STUDENT WROTE

"In conclusion, I would like to say that technology is a double edged sword"

WHY THIS MARK

The student takes a neutral stance by calling technology a 'double edged sword', but does not provide a clear, detailed position on whether it makes students better learners or more dependent.

CORRECTION

The student should clearly argue for one side or provide a nuanced position on the specific trade-off between access and learning quality.

MISSING

0 / 1

2.2 Provides relevant and logically developed arguments supporting the position

WHY THIS MARK

The student makes general statements about technology being useful or harmful but provides no logically developed arguments to support these claims.

CORRECTION

Develop specific arguments, such as how instant answers might bypass the critical thinking process required for deep learning.

PARTIAL

0.5 / 1

2.3 Recognises and meaningfully addresses an opposing viewpoint or limitation

STUDENT WROTE

"There are two sides to every coin. On the one hand, technology is very useful and helpful for the students. On the other hand, technology can also be harmful if it is not used in the correct manner."

WHY THIS MARK

The student acknowledges that there are two sides to the issue, but does not meaningfully address or analyze the opposing viewpoint.

CORRECTION

The student should describe a specific opposing argument (e.g., the benefit of personalized learning software) and then counter it or integrate it into their conclusion.

PARTIAL

0.5 / 1

2.4 Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims

STUDENT WROTE

"They use mobile phones, laptops, tablets and computers."

WHY THIS MARK

The student lists technological devices, but these are not used as examples to support a reasoned argument about learning outcomes.

CORRECTION

Use examples to illustrate a point, such as how using a calculator might hinder basic arithmetic skills (dependency) versus how online libraries expand research capabilities (better learning).

PARTIAL**0.5 / 1****2.5 Provides a coherent conclusion that follows from the discussion, with clear overall communication****STUDENT WROTE**

"In conclusion, I would like to say that technology is a double edged sword and students should use it wisely and carefully for their own benefit and for the benefit of society as a whole."

WHY THIS MARK

A conclusion is provided, but it is generic and does not follow from a detailed discussion, as no actual discussion took place in the body of the response.

CORRECTION

The conclusion should summarize the key arguments made in the response and provide a final reasoned judgment.

Question 3

The table below shows the relationship between the price of a product and the quantity demanded and supplied in a market. Price (Rs.) Quantity Demanded Quantity Supplied 10 100 20 20 80 40 30 60 60 40 40 80 50 20 100 Using the information provided, draw a properly labelled demand-and-supply graph and explain what the graph tells us about the market, including what happens when the market moves away from equilibrium and how an increase in the cost of production would affect the supply curve and the ...

1.75 / 5**CORRECT****1 / 1****3.1 Correctly plots and labels the demand and supply curves, with appropriate axes and direction****MODEL ANSWER**

The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis. The demand curve should slope downward from left to right... The supply curve should slope upward from left to right

STUDENT WROTE

"Fig 2 - Graph of demand and supply Price (Rs) Quantity ... D S E (Rs 30, 60 units)"

WHY THIS MARK

The student correctly represents the axes, the demand (D) and supply (S) curves, and the equilibrium point (E).

PARTIAL**0.5 / 1****3.2 Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium****MODEL ANSWER**

The two curves intersect at a price of Rs.30 and a quantity of 60 units. This point represents the market equilibrium because at this price the quantity demanded is equal to the quantity supplied.

STUDENT WROTE

"E (Rs 30, 60 units)"

WHY THIS MARK

The student correctly identifies the equilibrium point at Rs.30 and 60 units, but fails to explain why this point is the equilibrium (i.e., quantity demanded equals quantity supplied).

CORRECTION

Explain that equilibrium occurs where the demand and supply curves intersect, meaning the quantity consumers want to buy equals the quantity producers want to sell.

MISSING**0 / 1****3.3 Correctly explains shortage below equilibrium and surplus above equilibrium****MODEL ANSWER**

If the market price is below the equilibrium price, quantity demanded is greater than quantity supplied. This creates a shortage... If the market price is above the equilibrium price, quantity supplied is greater than quantity demanded. This creates a surplus

WHY THIS MARK

The student did not explain the concepts of shortage or surplus when the market moves away from equilibrium.

CORRECTION

Explain that a price below equilibrium leads to a shortage (demand > supply) and a price above equilibrium leads to a surplus (supply > demand).

PARTIAL**0.25 / 1****3.4 Correctly explains that increased production costs shift the supply curve left/upward****MODEL ANSWER**

If the cost of producing the product increases, production becomes less profitable at each existing price. Producers will therefore

be willing to supply less at each price. The supply curve shifts to the left/upward

STUDENT WROTE

"The market is affected by many factors such as the price, the cost of production"

WHY THIS MARK

The student mentions the cost of production as a factor affecting the market, but does not explain how an increase in this cost shifts the supply curve or affects equilibrium.

CORRECTION

Explain that an increase in production costs makes production less profitable, shifting the supply curve to the left/upward.

MISSING

0 / 1

3.5 Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph

MODEL ANSWER

The new equilibrium would generally occur at a higher price and lower quantity, assuming demand remains unchanged.

WHY THIS MARK

The student did not explain the resulting change in equilibrium price and quantity following a supply shift.

CORRECTION

Explain that a leftward shift in the supply curve leads to a higher equilibrium price and a lower equilibrium quantity.
