Question 1 — Science (5 marks)

1.3

A circuit is a closed path where current flows from the battery through the wires. The switch is used to turn it on and off.

Feedback: The student correctly explains that a circuit is a closed path and identifies the roles of the battery and the switch.

The ammeter is connected

1.3

(diagram not drawn — ran short of time)

Feedback: The student has correctly identified the placement of the ammeter and voltmeter could have been explicitly illustrated by drawing the battery, switch, bulb, and voltmeter in the positive terminal of the battery, connected in series and the voltmeter in parallel across the bulb.

Question 2 — English (5 marks)

2.2

I think the statement is largely true. Finding information has become easy, but understanding it has not become any easier, and those two things get confused.

Technology genuinely helps when a student is trying to understand. If a textbook explanation does not work, a video or a simulation might. My younger brother could not understand fractions from the book at all, but an app that cut a shape into pieces made it obvious to him in one evening.

Feedback: The student provides a logical argument distinguishing between the acquisition of information and the process of learning/understanding.

Feedback: The student uses a specific, relevant example of a learning app to support the argument that technology can aid understanding.

The problem is that the same access lets a student skip the thinking entirely. If the answer to every homework question is a search away, the homework stops doing its job, which was to make you

practise. Someone could argue that this is the student's fault and not technology's, and there is

something in that, but a tool that makes the shortcut effortless does share the blame.

Feedback: The student acknowledges the opposing view that the responsibility lies with the student rather than the tool.

So I would say technology improves access and only sometimes improves learning, and the difference is whether the student is using it to understand or to finish.

Feedback: The student takes a clear position and makes a compelling argument that technology improves access but does not always improve learning.

Question 3 — Economics (5 marks)

Flagged for human review - confirm these marks before releasing them.

Question 1

Explain how a simple electric circuit works and illustrate your explanation with a properly labelled circuit diagram showing a battery, switch, bulb, resistor, ammeter and voltmeter. Your answer should explain how the components are connected, the path followed by electric current, and how changing the resistance affects the current flowing through the circuit. **1 / 5**

MISSING

0 / 1

1.1 Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

MODEL ANSWER

A properly labelled diagram would therefore show the battery connected to the switch, resistor, bulb and ammeter in a single closed loop

STUDENT WROTE

"diagram not drawn - ran short of time"

WHY THIS MARK

The student explicitly stated that the diagram was not drawn.

CORRECTION

A properly labelled diagram showing the battery, switch, bulb, and resistor in a closed series loop was required.

MISSING

0 / 1

1.2 Correct placement of ammeter in series and voltmeter in parallel across the bulb

MODEL ANSWER

The ammeter must be connected in series because it measures the current flowing through the circuit. A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

STUDENT WROTE

"diagram not drawn - ran short of time"

WHY THIS MARK

Since no diagram was provided, the placement of the ammeter and voltmeter could not be assessed.

CORRECTION

The ammeter should be connected in series and the voltmeter in parallel across the bulb.

CORRECT

1 / 1

1.3 Correct explanation of current flow and the function of the main components

MODEL ANSWER

A simple electric circuit provides a closed path through which electric current can flow. The battery provides the potential difference that drives current through the circuit. The switch is used to open or close the circuit.

STUDENT WROTE

"A circuit is a closed path where current flows from the battery through the wires. The switch is used to turn it on and off."

WHY THIS MARK

The student correctly explains that a circuit is a closed path and identifies the roles of the battery and the switch.

MISSING

0 / 1

1.4 Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

MODEL ANSWER

According to Ohm's law, $V = IR$. If the voltage of the battery remains constant and the resistance is increased, the current flowing through the circuit decreases. Conversely, reducing the resistance allows more current to flow.

WHY THIS MARK

The student did not mention resistance or Ohm's law.

CORRECTION

The student should have explained that according to Ohm's law ($V=IR$), increasing resistance decreases current if voltage remains constant.

1.5 Clear, logically structured explanation with appropriate labels and current direction in the diagram**MODEL ANSWER**

The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

STUDENT WROTE

"diagram not drawn - ran short of time"

WHY THIS MARK

No diagram was provided to assess labels or current direction.

CORRECTION

A diagram should be included showing conventional current flowing from the positive to the negative terminal of the battery.

Question 2

"Technology has made information easier to access, but easier access to information does not necessarily mean better learning."

Discuss this statement in detail. Write a well-structured response explaining whether you believe technology makes students better learners or makes them dependent on easily available answers. Support your argument with relevant examples, consider an opposing viewpoint, and conclude with your own reasoned opinion.

5 / 5**CORRECT****1 / 1****2.1 Presents a clear position on whether/how technology affects learning****STUDENT WROTE**

"I think the statement is largely true... technology improves access and only sometimes improves learning, and the difference is whether the student is using it to understand or to finish."

WHY THIS MARK

The student takes a clear position that technology facilitates access but only conditionally improves learning.

CORRECT**1 / 1****2.2 Provides relevant and logically developed arguments supporting the position****STUDENT WROTE**

"Finding information has become easy, but understanding it has not become any easier, and those two things get confused. Technology genuinely helps when a student is trying to understand... The problem is that the same access lets a student skip the thinking entirely."

WHY THIS MARK

The student provides a logical argument distinguishing between the acquisition of information and the process of learning/understanding.

CORRECT**1 / 1****2.3 Recognises and meaningfully addresses an opposing viewpoint or limitation****STUDENT WROTE**

"Someone could argue that this is the student's fault and not technology's, and there is something in that, but a tool that makes the shortcut effortless does share the blame."

WHY THIS MARK

The student acknowledges the opposing view that the responsibility lies with the student rather than the tool.

CORRECT**1 / 1****2.4 Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims****STUDENT WROTE**

"My younger brother could not understand fractions from the book at all, but an app that cut a shape into pieces made it obvious to him in one evening."

WHY THIS MARK

The student uses a specific, relevant example of a learning app to support the argument that technology can aid understanding.

CORRECT**1 / 1****2.5 Provides a coherent conclusion that follows from the discussion, with clear overall communication****STUDENT WROTE**

"So I would say technology improves access and only sometimes improves learning, and the difference is whether the student is using it to understand or to finish."

WHY THIS MARK

The response concludes with a reasoned opinion that synthesizes the previous points of the discussion.

Question 3

The table below shows the relationship between the price of a product and the quantity demanded and supplied in a market. Price (Rs.) Quantity Demanded Quantity Supplied 10 100 20 80 40 30 60 60 40 40 80 50 20 100 Using the information provided, draw a properly labelled demand-and-supply graph and explain what the graph tells us about the market, including what happens when the market moves away from equilibrium and how an increase in the cost of production would affect the supply curve and the ...

0 / 5

MISSING

0 / 1

3.1 Correctly plots and labels the demand and supply curves, with appropriate axes and direction

MODEL ANSWER

The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis. The demand curve should slope downward from left to right... The supply curve should slope upward from left to right

WHY THIS MARK

The student left Question 3 entirely blank.

CORRECTION

The student should have plotted the demand and supply curves based on the provided table.

MISSING

0 / 1

3.2 Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium

MODEL ANSWER

The two curves intersect at a price of Rs.30 and a quantity of 60 units. This point represents the market equilibrium because at this price the quantity demanded is equal to the quantity supplied.

WHY THIS MARK

The student left Question 3 entirely blank.

CORRECTION

The student should have identified the equilibrium at Rs.30 and 60 units.

MISSING

0 / 1

3.3 Correctly explains shortage below equilibrium and surplus above equilibrium

MODEL ANSWER

If the market price is below the equilibrium price, quantity demanded is greater than quantity supplied. This creates a shortage... If the market price is above the equilibrium price, quantity supplied is greater than quantity demanded. This creates a surplus

WHY THIS MARK

The student left Question 3 entirely blank.

CORRECTION

The student should have explained that prices below equilibrium cause shortages and prices above cause surpluses.

MISSING

0 / 1

3.4 Correctly explains that increased production costs shift the supply curve left/upward

MODEL ANSWER

If the cost of producing the product increases, production becomes less profitable at each existing price. Producers will therefore be willing to supply less at each price. The supply curve shifts to the left/upward

WHY THIS MARK

The student left Question 3 entirely blank.

CORRECTION

The student should have explained that increased production costs shift the supply curve to the left/upward.

MISSING

0 / 1

3.5 Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph

MODEL ANSWER

The new equilibrium would generally occur at a higher price and lower quantity, assuming demand remains unchanged.

WHY THIS MARK

The student left Question 3 entirely blank.

CORRECTION

The student should have explained that the new equilibrium would be at a higher price and lower quantity.
