

Question 1 — Science (5 marks)

1.4
Circuit: battery, switch, resistor, bulb and ammeter in series. Voltmeter in parallel across the bulb.

Feedback: The student correctly identifies the placement of the components in the circuit. The student also identifies the function of the components (e.g., battery providing potential difference) or how the circuit works as a closed path.

Correction: The answer should explain that the battery provides the potential difference to drive the current and the switch controls the opening/closing of the circuit.

Fig 1 — Series circuit

1.4

$V = IR$. More resistance, less current.

Feedback: The student correctly identifies Ohm's law and the inverse relationship between resistance and current.

Question 2 — English (5 marks)

Technology helps students but also makes them lazy. Both sides are there. It depends on the student.

Feedback: The student acknowledges that pros and cons exist but does not provide a structured discussion or discuss them.
Correction: A conclusion is provided but it is not coherent as it does not follow a structured discussion. The student should provide a balanced and opposing standpoint explaining why specific sides are preferred by their own argument or creates dependency.

Question 3 — Economics (5 marks)

Equilibrium: Rs 30, 60 units. Cost increase shifts S to S1.

Feedback: The student correctly identifies that an increase in cost shifts the supply curve. Explain why this point represents equilibrium.

Correction: The student should explain that equilibrium occurs where quantity demanded equals quantity supplied.

Feedback: The student correctly identifies the axes and the demand and supply curves in the diagram.

Grading Report

GradeSense Evaluation Set - 2026-09-02

9.5 / 15 (63.3%)

Flagged for human review - confirm these marks before releasing them.

Question 1

Explain how a simple electric circuit works and illustrate your explanation with a properly labelled circuit diagram showing a battery, switch, bulb, resistor, ammeter and voltmeter. Your answer should explain how the components are connected, the path followed by electric current, and how changing the resistance affects the current flowing through the circuit.

4.5 / 5

CORRECT

1 / 1

1.1 Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

MODEL ANSWER

A properly labelled diagram would therefore show the battery connected to the switch, resistor, bulb and ammeter in a single closed loop

STUDENT WROTE

"Circuit: battery, switch, resistor, bulb and ammeter in series."

WHY THIS MARK

The student correctly identifies the components and their series connection.

CORRECT

1 / 1

1.2 Correct placement of ammeter in series and voltmeter in parallel across the bulb

MODEL ANSWER

The ammeter must be connected in series because it measures the current flowing through the circuit. A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

STUDENT WROTE

"Ammeter (in series) ... Voltmeter (parallel across bulb)"

WHY THIS MARK

The student correctly specifies the placement of the ammeter in series and the voltmeter in parallel.

PARTIAL

0.5 / 1

1.3 Correct explanation of current flow and the function of the main components

MODEL ANSWER

A simple electric circuit provides a closed path through which electric current can flow. The battery provides the potential difference that drives current through the circuit. The switch is used to open or close the circuit.

STUDENT WROTE

"Circuit: battery, switch, resistor, bulb and ammeter in series."

WHY THIS MARK

The student lists the components and their arrangement but does not explain the function of the components (e.g., battery providing potential difference) or how the circuit works as a closed path.

CORRECTION

The answer should explain that the battery provides the potential difference to drive the current and the switch controls the opening/closing of the circuit.

CORRECT

1 / 1

1.4 Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

MODEL ANSWER

According to Ohm's law, $V = IR$. If the voltage of the battery remains constant and the resistance is increased, the current flowing through the circuit decreases. Conversely, reducing the resistance allows more current to flow.

STUDENT WROTE

" $V = IR$. More resistance, less current."

WHY THIS MARK

The student correctly identifies Ohm's law and the inverse relationship between resistance and current.

CORRECT

1 / 1

1.5 Clear, logically structured explanation with appropriate labels and current direction in the diagram

MODEL ANSWER

The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

STUDENT WROTE

"conventional current I"

WHY THIS MARK

The student indicates the conventional current direction and provides labels for the diagram components.

Question 2

"Technology has made information easier to access, but easier access to information does not necessarily mean better learning." Discuss this statement in detail. Write a well-structured response explaining whether you believe technology makes students better learners or makes them dependent on easily available answers. Support your argument with relevant examples, consider an opposing viewpoint, and conclude with your own reasoned opinion.

1.5 / 5

PARTIAL

0.5 / 1

2.1 Presents a clear position on whether/how technology affects learning

STUDENT WROTE

"Technology helps students but also makes them lazy."

WHY THIS MARK

A position is stated, but it is extremely brief and lacks the detail required for a 'discussion'.

CORRECTION

The student should provide a more detailed thesis statement explaining their specific stance on whether technology improves learning or creates dependency.

MISSING

0 / 1

2.2 Provides relevant and logically developed arguments supporting the position

WHY THIS MARK

The student did not provide any developed arguments to support their position.

CORRECTION

The student needs to develop logical arguments explaining how technology affects learning, using evidence or reasoning.

PARTIAL

0.5 / 1

2.3 Recognises and meaningfully addresses an opposing viewpoint or limitation

STUDENT WROTE

"Both sides are there."

WHY THIS MARK

The student acknowledges that opposing views exist but does not meaningfully address or discuss them.

CORRECTION

The student should explicitly describe an opposing viewpoint and explain why it is valid or how it is countered by their own argument.

MISSING

0 / 1

2.4 Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims

WHY THIS MARK

No examples or reasoning were provided to support the claims.

CORRECTION

The student should include specific examples (e.g., online courses, AI tools) to illustrate their points.

PARTIAL

0.5 / 1

2.5 Provides a coherent conclusion that follows from the discussion, with clear overall communication

STUDENT WROTE

"It depends on the student."

WHY THIS MARK

A conclusion is provided, but it is not coherent as it does not follow a structured discussion.

CORRECTION

The conclusion should summarize the main points of the discussion and provide a reasoned final opinion.

Question 3

The table below shows the relationship between the price of a product and the quantity demanded and supplied in a market. Price (Rs.) Quantity Demanded Quantity Supplied 10 100 20 20 80 40 30 60 60 40 40 80 50 20 100 Using the information provided, draw a properly labelled demand-and-supply graph and explain what the graph tells us about the market, including what happens when the market moves away from equilibrium and how an increase in the cost of production would affect the supply curve and the ...

3.5 / 5

CORRECT

1 / 1

3.1 Correctly plots and labels the demand and supply curves, with appropriate axes and direction

MODEL ANSWER

The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis. The demand curve should slope downward from left to right... The supply curve should slope upward from left to right

STUDENT WROTE

"Fig 2 - Demand and supply Price (Rs) Quantity ... D S"

WHY THIS MARK

The student correctly identifies the axes and the demand and supply curves in the diagram.

PARTIAL

0.5 / 1

3.2 Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium

MODEL ANSWER

The two curves intersect at a price of Rs.30 and a quantity of 60 units. This point represents the market equilibrium because at this price the quantity demanded is equal to the quantity supplied.

STUDENT WROTE

"Equilibrium: Rs 30, 60 units."

WHY THIS MARK

The student correctly identifies the equilibrium price and quantity but does not explain why this point represents equilibrium.

CORRECTION

The student should explain that equilibrium occurs where quantity demanded equals quantity supplied.

MISSING

0 / 1

3.3 Correctly explains shortage below equilibrium and surplus above equilibrium

MODEL ANSWER

If the market price is below the equilibrium price, quantity demanded is greater than quantity supplied. This creates a shortage... If the market price is above the equilibrium price, quantity supplied is greater than quantity demanded. This creates a surplus

WHY THIS MARK

The student did not explain the concepts of shortage or surplus when the market moves away from equilibrium.

CORRECTION

The student should explain that prices below equilibrium lead to shortages and prices above lead to surpluses.

CORRECT

1 / 1

3.4 Correctly explains that increased production costs shift the supply curve left/upward

MODEL ANSWER

If the cost of producing the product increases, production becomes less profitable at each existing price. Producers will therefore be willing to supply less at each price. The supply curve shifts to the left/upward

STUDENT WROTE

"Cost increase shifts S to S1."

WHY THIS MARK

The student correctly identifies that an increase in cost shifts the supply curve.

CORRECT

1 / 1

3.5 Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph

MODEL ANSWER

The new equilibrium would generally occur at a higher price and lower quantity, assuming demand remains unchanged.

STUDENT WROTE

"E1 (higher price, lower qty)"

WHY THIS MARK

The student correctly identifies the resulting change in equilibrium price and quantity.
