

Rohit Menon · Roll No. S-1057 · Page 1

1.3

Feedback: The student correctly explains the basic function of the circuit, the battery, and the bulb lights up. When it is open nothing flows.

1.1

Feedback: The student correctly identifies and represents the main components in a closed system, also shown in the diagram.

1.4

Feedback: The student correctly explains the inverse relationship between resistance and current.

1.5

Switch (S)

Resistor R

1.2

4

Voltmeter (parallel across bulb)

Bulb

A

Ammeter (across the wire)

Question 2 — English (5 marks)

Technology has made learning much easier for students. Everything is available on the internet

Feedback: The student provides a logical argument regarding the accessibility of supplementary videos, notes and websites for every subject and they are mostly free.

2.4

Feedback: The student uses a relevant and specific example to support their claim.

Feedback: The student presents a clear, position brief, technology sign that follows learning their arguments.

Question 3 — Economics (5 marks)

3.2

The demand curve goes downward and the supply curve goes upward. They meet at Rs 30 and 60 units, which is the equilibrium point because at that price the quantity demanded and the quantity supplied are the same.

Feedback: The student correctly identifies the equilibrium point and explains the reasoning based on the equality of demand and supply.

If the price is Rs 20 the supply is more than the demand

3.3

When the price is below the equilibrium the demand is more than the supply, so there is a shortage of goods in the market. When the price is above the equilibrium there is a surplus because too much is produced.

Feedback: The student correctly explains the concepts of shortage and surplus relative to the equilibrium price.

Fig 2 — Demand and supply graph

11 / 15 (73.3%)

Flagged for human review - confirm these marks before releasing them.

Question 1

Explain how a simple electric circuit works and illustrate your explanation with a properly labelled circuit diagram showing a battery, switch, bulb, resistor, ammeter and voltmeter. Your answer should explain how the components are connected, the path followed by electric current, and how changing the resistance affects the current flowing through the circuit. **4 / 5**

CORRECT

1 / 1

1.1 Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

MODEL ANSWER

A properly labelled diagram would therefore show the battery connected to the switch, resistor, bulb and ammeter in a single closed loop

STUDENT WROTE

"I have drawn the battery, switch, resistor and bulb in one loop."

WHY THIS MARK

The student correctly identifies and represents the main components in a closed series loop.

PARTIAL

0.5 / 1

1.2 Correct placement of ammeter in series and voltmeter in parallel across the bulb

MODEL ANSWER

The ammeter must be connected in series because it measures the current flowing through the circuit. A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

STUDENT WROTE

"Ammeter (across the wire) ... Voltmeter (parallel across bulb)"

WHY THIS MARK

The voltmeter is correctly placed in parallel. However, describing the ammeter as 'across the wire' is ambiguous and typically suggests a parallel connection, whereas an ammeter must be in series.

CORRECTION

The ammeter should be connected in series within the circuit loop, not 'across' a wire.

CORRECT

1 / 1

1.3 Correct explanation of current flow and the function of the main components

MODEL ANSWER

A simple electric circuit provides a closed path through which electric current can flow. The battery provides the potential difference that drives current through the circuit. The switch is used to open or close the circuit.

STUDENT WROTE

"A circuit is a closed path for current. The battery gives the voltage and the switch opens and closes the circuit."

WHY THIS MARK

The student correctly explains the basic function of the circuit, the battery, and the switch.

CORRECT

1 / 1

1.4 Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

MODEL ANSWER

According to Ohm's law, $V = IR$. If the voltage of the battery remains constant and the resistance is increased, the current flowing through the circuit decreases. Conversely, reducing the resistance allows more current to flow.

STUDENT WROTE

"If the resistance is increased the current becomes less because the resistance opposes the flow of current."

WHY THIS MARK

The student correctly explains the inverse relationship between resistance and current.

1.5 Clear, logically structured explanation with appropriate labels and current direction in the diagram**MODEL ANSWER**

The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

STUDENT WROTE

"Fig 1 - Circuit Switch (S) Resistor R Bulb A Ammeter (across the wire) Battery + - V Voltmeter (parallel across bulb)"

WHY THIS MARK

The student provided labels for the components, but failed to indicate the direction of the conventional current flow in the diagram description.

CORRECTION

The diagram should include arrows showing current flowing from the positive terminal of the battery to the negative terminal.

Question 2

"Technology has made information easier to access, but easier access to information does not necessarily mean better learning."

Discuss this statement in detail. Write a well-structured response explaining whether you believe technology makes students better learners or makes them dependent on easily available answers. Support your argument with relevant examples, consider an opposing viewpoint, and conclude with your own reasoned opinion.

4 / 5**CORRECT****1 / 1****2.1 Presents a clear position on whether/how technology affects learning****STUDENT WROTE**

"So I think technology has helped students learn better than before."

WHY THIS MARK

The student presents a clear position that technology improves learning.

CORRECT**1 / 1****2.2 Provides relevant and logically developed arguments supporting the position****STUDENT WROTE**

"Everything is available on the internet now, so if you do not understand something in class you can just look it up at home."

WHY THIS MARK

The student provides a logical argument regarding the accessibility of supplementary information.

MISSING**0 / 1****2.3 Recognises and meaningfully addresses an opposing viewpoint or limitation****WHY THIS MARK**

The student did not address any opposing viewpoints or limitations of technology in learning.

CORRECTION

The response should have considered the other side of the argument, such as the risk of students becoming dependent on easy answers or the presence of distractions.

CORRECT**1 / 1****2.4 Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims****STUDENT WROTE**

"For example, a student who misses school because of illness can still catch up with the lessons by watching recordings."

WHY THIS MARK

The student uses a relevant and specific example to support their claim.

CORRECT**1 / 1****2.5 Provides a coherent conclusion that follows from the discussion, with clear overall communication****STUDENT WROTE**

"So I think technology has helped students learn better than before."

WHY THIS MARK

The student provides a clear, though brief, conclusion that follows from their arguments.

Question 3

The table below shows the relationship between the price of a product and the quantity demanded and supplied in a market. Price (Rs.) Quantity Demanded Quantity Supplied 10 100 20 20 80 40 30 60 60 40 40 80 50 20 100 Using the information provided, draw a properly labelled demand-and-supply graph and explain what the graph tells us about the market, including what happens when the market moves away from equilibrium and how an increase in the cost of production would affect the supply curve and the ...

CORRECT

1 / 1

3.1 Correctly plots and labels the demand and supply curves, with appropriate axes and direction

MODEL ANSWER

The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis. The demand curve should slope downward from left to right... The supply curve should slope upward from left to right

STUDENT WROTE

"The demand curve goes downward and the supply curve goes upward. ... Fig 2 - Demand and supply graph Price (Rs) Quantity ... D S E (Rs 30, 60 units)"

WHY THIS MARK

The student correctly describes the slopes of the curves and provides a labelled graph representation.

CORRECT

1 / 1

3.2 Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium

MODEL ANSWER

The two curves intersect at a price of Rs.30 and a quantity of 60 units. This point represents the market equilibrium because at this price the quantity demanded is equal to the quantity supplied.

STUDENT WROTE

"They meet at Rs 30 and 60 units, which is the equilibrium point because at that price the quantity demanded and the quantity supplied are the same."

WHY THIS MARK

The student correctly identifies the equilibrium point and explains the reasoning based on the equality of demand and supply.

CORRECT

1 / 1

3.3 Correctly explains shortage below equilibrium and surplus above equilibrium

MODEL ANSWER

If the market price is below the equilibrium price, quantity demanded is greater than quantity supplied. This creates a shortage... If the market price is above the equilibrium price, quantity supplied is greater than quantity demanded. This creates a surplus

STUDENT WROTE

"When the price is below the equilibrium the demand is more than the supply, so there is a shortage of goods in the market. When the price is above the equilibrium there is a surplus because too much is produced."

WHY THIS MARK

The student correctly explains the concepts of shortage and surplus relative to the equilibrium price.

MISSING

0 / 1

3.4 Correctly explains that increased production costs shift the supply curve left/upward

MODEL ANSWER

If the cost of producing the product increases, production becomes less profitable at each existing price. Producers will therefore be willing to supply less at each price. The supply curve shifts to the left/upward

WHY THIS MARK

The student completely omitted the part of the question regarding the increase in the cost of production and its effect on the supply curve.

CORRECTION

The student should explain that an increase in production costs makes production less profitable, shifting the supply curve to the left/upward.

MISSING

0 / 1

3.5 Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph

MODEL ANSWER

The new equilibrium would generally occur at a higher price and lower quantity, assuming demand remains unchanged.

WHY THIS MARK

The student did not explain the resulting change in market equilibrium (higher price, lower quantity) following a supply shift.

CORRECTION

The student should explain that a leftward shift in supply leads to a new equilibrium with a higher price and a lower quantity.
