Question 1 — Science (5 marks)

1.3

A circuit is a path made of wires where electricity travels from one end of the battery to the other.

The battery stores the current inside it and releases it when the switch is pressed.

Feedback: The student correctly identifies the circuit as a path and the role of the switch, but

incorrectly states that the battery 'stores current'.

Correction: Batteries store chemical energy and provide a potential difference (voltage) that drives the flow of current; they do not store 'current' itself.

The voltmeter should be connected in series with the bulb so that all the voltage passes through it and can be measured properly. The ammeter I have connected across the wire so that it can catch the current going past.

1.4

If we increase the resistance in the circuit then the current increases, because the resistor pushes

the current forward and makes the bulb brighter. This is why bigger resistors are used in bright

lights.

Feedback: The student incorrectly claims that increasing resistance increases current.

Correction: According to Ohm's Law ($V=IR$), if voltage is constant, increasing the resistance decreases the current flowing through the circuit.

1.5

Fig 1 — My circuit

Question 2 — English (5 marks)

Feedback: The response makes a point of design and does not elaborate on the diagram and does not mention the

placement of the components in series would prevent the circuit from functioning as a simple series

circuit. The student also does not mention the diagram. The student also does not mention the diagram.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Correction: The student should mention the diagram and the placement of the components in series.

Question 3 — Economics (5 marks)

3.2

From the table the equilibrium is at Rs 10 and 100 units, because that is the row where the demand is the highest. Equilibrium means the point where the buyers are the most happy.

Feedback: The student incorrectly identifies equilibrium as the point of highest demand.

5.3
Equilibrium occurs where quantity demanded equals quantity supplied.

if the price goes below the equilibrium there will be a surplus because nobody wants to buy at a low price. If the price goes above it there will be a shortage because the sellers keep the goods with them.

with them.

Feedback: The student has the definitions of shortage and surplus exactly reversed.

5.4
Correction: Below equilibrium, demand exceeds supply, creating a shortage. Above equilibrium, supply exceeds demand, creating a surplus.

If the cost of production increases the supply curve will shift to the right because the company has to sell more units to cover the cost, and the price will come down.

Feedback: The student incorrectly states that that a cost increase in production shifts the supply curve to the left and a decrease in price.

Correction: A decrease in price shifts the supply curve to the right because it is more profitable to sell more units. An increase in price shifts the supply curve to the left because it is less profitable to sell more units.

Correction: A decrease in price shifts the supply curve to the right because it is more profitable to sell more units. An increase in price shifts the supply curve to the left because it is less profitable to sell more units.

Correction: A decrease in price shifts the supply curve to the right because it is more profitable to sell more units. An increase in price shifts the supply curve to the left because it is less profitable to sell more units.

Feedback: The student did not draw a graph; they provided a list of numbers. Additionally, the identified equilibrium point is incorrect based on the provided table.

Correction: The student should plot the demand and supply curves on a coordinate plane with Price on the Y-axis and Quantity on the X-axis.

Grading Report

GradeSense Evaluation Set - 2026-09-02

Submission cmtjtvql9003sveh80t3fsoux

2 / 15 (13.3%)

Flagged for human review - confirm these marks before releasing them.

Question 1

Explain how a simple electric circuit works and illustrate your explanation with a properly labelled circuit diagram showing a battery, switch, bulb, resistor, ammeter and voltmeter. Your answer should explain how the components are connected, the path followed by electric current, and how changing the resistance affects the current flowing through the circuit.

0.5 / 5

INCORRECT

0 / 1

1.1 Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

MODEL ANSWER

A properly labelled diagram would therefore show the battery connected to the switch, resistor, bulb and ammeter in a single closed loop

STUDENT WROTE

"Fig 1 - My circuit Switch (S) Resistor R Bulb A Ammeter (across the wire) Battery + - V Voltmeter (in series with bulb)"

WHY THIS MARK

The student provided a list of components rather than a diagram. Furthermore, the placement of the voltmeter in series would prevent the circuit from functioning as a simple series path for the main components.

CORRECTION

A circuit diagram should be a visual representation showing the battery, switch, resistor, bulb, and ammeter connected in a single closed loop.

INCORRECT

0 / 1

1.2 Correct placement of ammeter in series and voltmeter in parallel across the bulb

MODEL ANSWER

The ammeter must be connected in series because it measures the current flowing through the circuit. A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

STUDENT WROTE

"The voltmeter should be connected in series with the bulb... The ammeter I have connected across the wire"

WHY THIS MARK

The student has reversed the correct placement of the ammeter and voltmeter.

CORRECTION

The ammeter must be connected in series to measure current, and the voltmeter must be connected in parallel across the component to measure potential difference.

PARTIAL

0.5 / 1

1.3 Correct explanation of current flow and the function of the main components

MODEL ANSWER

A simple electric circuit provides a closed path through which electric current can flow. The battery provides the potential difference that drives current through the circuit. The switch is used to open or close the circuit.

STUDENT WROTE

"A circuit is a path made of wires where electricity travels from one end of the battery to the other. The battery stores the current inside it and releases it when the switch is pressed."

WHY THIS MARK

The student correctly identifies the circuit as a path and the role of the switch, but incorrectly states that the battery 'stores current'.

CORRECTION

Batteries store chemical energy and provide a potential difference (voltage) that drives the flow of current; they do not store 'current' itself.

INCORRECT

0 / 1

1.4 Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

MODEL ANSWER

According to Ohm's law, $V = IR$. If the voltage of the battery remains constant and the resistance is increased, the current flowing through the circuit decreases. Conversely, reducing the resistance allows more current to flow.

STUDENT WROTE

"If we increase the resistance in the circuit then the current increases, because the resistor pushes the current forward and makes the bulb brighter."

WHY THIS MARK

The student incorrectly claims that increasing resistance increases current.

CORRECTION

According to Ohm's Law ($V=IR$), if voltage is constant, increasing the resistance decreases the current flowing through the circuit.

INCORRECT

0 / 1

1.5 Clear, logically structured explanation with appropriate labels and current direction in the diagram

MODEL ANSWER

The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

STUDENT WROTE

"Fig 1 - My circuit Switch (S) Resistor R Bulb A Ammeter (across the wire) Battery + - V Voltmeter (in series with bulb)"

WHY THIS MARK

The response lacks a proper diagram, does not indicate current direction, and the explanation is logically flawed.

CORRECTION

The answer should include a diagram with arrows showing conventional current flowing from the positive to the negative terminal of the battery.

Question 2

"Technology has made information easier to access, but easier access to information does not necessarily mean better learning." Discuss this statement in detail. Write a well-structured response explaining whether you believe technology makes students better learners or makes them dependent on easily available answers. Support your argument with relevant examples, consider an opposing viewpoint, and conclude with your own reasoned opinion.

1.5 / 5

CORRECT

1 / 1

2.1 Presents a clear position on whether/how technology affects learning

STUDENT WROTE

"Therefore technology is good for learning and all schools should use it."

WHY THIS MARK

The student clearly states their position that technology is beneficial for learning.

INCORRECT

0 / 1

2.2 Provides relevant and logically developed arguments supporting the position

STUDENT WROTE

"Technology is very good and it is the future. Everybody uses technology today and it has made everything better. Students should use technology because it is modern and fast."

WHY THIS MARK

The student makes generic assertions ('it is the future', 'made everything better') rather than providing logically developed arguments regarding learning.

CORRECTION

The student should explain *how* technology improves learning, such as by providing access to diverse resources or enabling personalized learning speeds.

MISSING

0 / 1

2.3 Recognises and meaningfully addresses an opposing viewpoint or limitation

WHY THIS MARK

The student did not address any opposing viewpoints or limitations of technology in learning.

CORRECTION

The student should have considered the opposing view, such as the risk of students becoming dependent on easy answers or the digital divide.

MISSING

0 / 1

2.4 Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims

WHY THIS MARK

No relevant examples were provided to support the claims.

CORRECTION

The student should provide specific examples, such as using educational software or online libraries, to illustrate their points.

PARTIAL

0.5 / 1

2.5 Provides a coherent conclusion that follows from the discussion, with clear overall communication

STUDENT WROTE

"Therefore technology is good for learning and all schools should use it."

WHY THIS MARK

While the student provides a concluding sentence, it does not follow from a detailed discussion as no actual discussion took place.

CORRECTION

A coherent conclusion should summarize the arguments made in the body of the essay and provide a final reasoned judgment.

Question 3

The table below shows the relationship between the price of a product and the quantity demanded and supplied in a market. Price (Rs.) Quantity Demanded Quantity Supplied 10 100 20 20 80 40 30 60 60 40 40 80 50 20 100 Using the information provided, draw a properly labelled demand-and-supply graph and explain what the graph tells us about the market, including what happens when the market moves away from equilibrium and how an increase in the cost of production would affect the supply curve and the ...

0 / 5

INCORRECT

0 / 1

3.1 Correctly plots and labels the demand and supply curves, with appropriate axes and direction

MODEL ANSWER

The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis. The demand curve should slope downward from left to right... The supply curve should slope upward from left to right

STUDENT WROTE

"Fig 2 - Graph Price (Rs) Quantity 10 20 30 40 50 20 40 60 80 100 D S E (Rs 10, 100 units)"

WHY THIS MARK

The student did not draw a graph; they provided a list of numbers. Additionally, the identified equilibrium point is incorrect based on the provided table.

CORRECTION

The student should plot the demand and supply curves on a coordinate plane with Price on the Y-axis and Quantity on the X-axis.

INCORRECT

0 / 1

3.2 Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium

MODEL ANSWER

The two curves intersect at a price of Rs.30 and a quantity of 60 units. This point represents the market equilibrium because at this price the quantity demanded is equal to the quantity supplied.

STUDENT WROTE

"the equilibrium is at Rs 10 and 100 units, because that is the row where the demand is the highest."

WHY THIS MARK

The student incorrectly identifies equilibrium as the point of highest demand. Equilibrium occurs where quantity demanded equals quantity supplied.

CORRECTION

Equilibrium is at Rs.30 and 60 units, as this is where Quantity Demanded (60) = Quantity Supplied (60).

INCORRECT

0 / 1

3.3 Correctly explains shortage below equilibrium and surplus above equilibrium

MODEL ANSWER

If the market price is below the equilibrium price, quantity demanded is greater than quantity supplied. This creates a shortage... If the market price is above the equilibrium price, quantity supplied is greater than quantity demanded. This creates a surplus

STUDENT WROTE

"If the price goes below the equilibrium there will be a surplus because nobody wants to buy at a low price. If the price goes above it there will be a shortage because the sellers keep the goods with them."

WHY THIS MARK

The student has the definitions of shortage and surplus exactly reversed.

CORRECTION

Below equilibrium, demand exceeds supply, creating a shortage. Above equilibrium, supply exceeds demand, creating a surplus.

INCORRECT

0 / 1

3.4 Correctly explains that increased production costs shift the supply curve left/upward

MODEL ANSWER

If the cost of producing the product increases, production becomes less profitable at each existing price. Producers will therefore be willing to supply less at each price. The supply curve shifts to the left/upward

STUDENT WROTE

"If the cost of production increases the supply curve will shift to the right because the company has to sell more units to cover the cost"

WHY THIS MARK

The student incorrectly states that increased production costs shift the supply curve to the right.

CORRECTION

An increase in production costs makes production less profitable, shifting the supply curve to the left (or upward).

INCORRECT

0 / 1

3.5 Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph

MODEL ANSWER

The new equilibrium would generally occur at a higher price and lower quantity, assuming demand remains unchanged.

STUDENT WROTE

"and the price will come down."

WHY THIS MARK

The student incorrectly concludes that an increase in production costs leads to a decrease in price.

CORRECTION

A leftward shift in the supply curve (due to increased costs) leads to a higher equilibrium price and a lower equilibrium quantity.
