Sana Qureshi · Roll No. S-1071 · Page 1

Question 1 — Science (5 marks)

Explain how a simple electric circuit works.

Question 2 — English (5 marks)

2.1

Technology has made

Feedback: The student only wrote a fragment of the prompt and did not present a position.

Question 3 — Economics (5 marks)

3.1

Not attempted

Feedback: The student explicitly stated that this question was not attempted.

Question 1

Explain how a simple electric circuit works and illustrate your explanation with a properly labelled circuit diagram showing a battery, switch, bulb, resistor, ammeter and voltmeter. Your answer should explain how the components are connected, the path followed by electric current, and how changing the resistance affects the current flowing through the circuit. 0 / 5

MISSING

0 / 1

1.1 Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

MODEL ANSWER

A properly labelled diagram would therefore show the battery connected to the switch, resistor, bulb and ammeter in a single closed loop

WHY THIS MARK

The student did not provide a circuit diagram or any explanation.

MISSING

0 / 1

1.2 Correct placement of ammeter in series and voltmeter in parallel across the bulb

MODEL ANSWER

The ammeter must be connected in series because it measures the current flowing through the circuit. A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

WHY THIS MARK

The student did not provide a circuit diagram or any explanation.

MISSING

0 / 1

1.3 Correct explanation of current flow and the function of the main components

MODEL ANSWER

A simple electric circuit provides a closed path through which electric current can flow. The battery provides the potential difference that drives current through the circuit. The switch is used to open or close the circuit.

WHY THIS MARK

The student did not provide an explanation of current flow or component functions.

MISSING

0 / 1

1.4 Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

MODEL ANSWER

According to Ohm's law, $V = IR$. If the voltage of the battery remains constant and the resistance is increased, the current flowing through the circuit decreases. Conversely, reducing the resistance allows more current to flow.

WHY THIS MARK

The student did not explain the relationship between resistance and current.

MISSING

0 / 1

1.5 Clear, logically structured explanation with appropriate labels and current direction in the diagram

MODEL ANSWER

The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

WHY THIS MARK

The student did not provide a diagram or a structured explanation.

Question 2

"Technology has made information easier to access, but easier access to information does not necessarily mean better learning." Discuss this statement in detail. Write a well-structured response explaining whether you believe technology makes students better learners or makes them dependent on easily available answers. Support your argument with relevant examples, consider an opposing viewpoint, and conclude with your own reasoned opinion. 0 / 5

MISSING

0 / 1

2.1 Presents a clear position on whether/how technology affects learning

STUDENT WROTE

"Technology has made"

WHY THIS MARK

The student only wrote a fragment of the prompt and did not present a position.

MISSING

0 / 1

2.2 Provides relevant and logically developed arguments supporting the position

WHY THIS MARK

The student did not provide any arguments.

MISSING

0 / 1

2.3 Recognises and meaningfully addresses an opposing viewpoint or limitation

WHY THIS MARK

The student did not address any opposing viewpoints.

MISSING

0 / 1

2.4 Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims

WHY THIS MARK

The student did not provide any examples or reasoning.

MISSING

0 / 1

2.5 Provides a coherent conclusion that follows from the discussion, with clear overall communication

WHY THIS MARK

The student did not provide a conclusion.

Question 3

The table below shows the relationship between the price of a product and the quantity demanded and supplied in a market. Price (Rs.) Quantity Demanded Quantity Supplied 10 100 20 80 40 30 60 60 40 40 80 50 20 100 Using the information provided, draw a properly labelled demand-and-supply graph and explain what the graph tells us about the market, including what happens when the market moves away from equilibrium and how an increase in the cost of production would affect the supply curve and the ...

0 / 5

MISSING

0 / 1

3.1 Correctly plots and labels the demand and supply curves, with appropriate axes and direction

MODEL ANSWER

The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis. The demand curve should slope downward from left to right... The supply curve should slope upward from left to right

STUDENT WROTE

"Not attempted."

WHY THIS MARK

The student explicitly stated that this question was not attempted.

MISSING

0 / 1

3.2 Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium

MODEL ANSWER

The two curves intersect at a price of Rs.30 and a quantity of 60 units. This point represents the market equilibrium because at this price the quantity demanded is equal to the quantity supplied.

WHY THIS MARK

The student did not identify the equilibrium.

MISSING

0 / 1

3.3 Correctly explains shortage below equilibrium and surplus above equilibrium

MODEL ANSWER

If the market price is below the equilibrium price, quantity demanded is greater than quantity supplied. This creates a shortage...

If the market price is above the equilibrium price, quantity supplied is greater than quantity demanded. This creates a surplus

WHY THIS MARK

The student did not explain shortage or surplus.

MISSING

0 / 1

3.4 Correctly explains that increased production costs shift the supply curve left/upward

MODEL ANSWER

If the cost of producing the product increases, production becomes less profitable at each existing price. Producers will therefore be willing to supply less at each price. The supply curve shifts to the left/upward

WHY THIS MARK

The student did not explain the effect of production costs on the supply curve.

MISSING

0 / 1

3.5 Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph

MODEL ANSWER

The new equilibrium would generally occur at a higher price and lower quantity, assuming demand remains unchanged.

WHY THIS MARK

The student did not explain the resulting change in equilibrium.
