

GradeSense — Student Answer Script

Devansh Rao · Roll No. S-1080 · Page 1

Question 1 — Science (5 marks)

1.3

An electric circuit is a closed conducting path through which current can flow. The battery provides the potential difference that drives the current. The switch opens or closes the path, and when it is closed the current passes through the resistor and the bulb.

Feedback: The student provides a correct explanation of the circuit's function and the roles of the battery and switch.

1.2

The battery, switch, resistor, bulb and ammeter are all connected in series in one closed loop. The ammeter must be in series because it measures the current flowing through the circuit. The voltmeter is connected in parallel across the bulb because it measures the potential difference between the two ends of the bulb.

Feedback: The student correctly identifies that the main components are connected in a closed series loop.

Conventional current flows from the positive terminal of the battery through the external circuit to the negative terminal, as shown by the arrow.

Feedback: The student correctly describes the direction of conventional current and indicates that the diagram is labelled.

By Ohm's law $V = IR$. If the voltage stays the same and the resistance is increased, the current through the circuit decreases. Reducing the resistance lets more current flow.

Feedback: The student correctly applies Ohm's law to explain the inverse relationship between resistance and current.

Fig 1 - Circuit diagram

Question 2 — English (5 marks)

Technology has changed how students learn because information that was once hard to reach is now available in seconds. A student can watch a video or read an explanation until a difficult concept becomes clear, and can work at their own pace.

2.3

However, easy access can also create dependence. A student who looks up every answer finishes the homework but never learns to reason it out, and may accept wrong information just because it is online.

2.1

In my opinion technology is neither good nor bad by itself. It depends on whether the student uses it to understand or only to copy. It should support thinking, not replace it.

Feedback: The student provides a clear, balanced position on the impact of technology from the preceding discussion.

Question 3 — Economics (5 marks)

Quantity is on the horizontal axis and price on the vertical axis. The demand curve slopes downward and the supply curve slopes upward. They intersect at Rs 30 and 60 units, which is the equilibrium because quantity demanded equals quantity supplied there.

Feedback: The student correctly identifies the equilibrium point and explains why it is the equilibrium.

Below the equilibrium price there is a shortage because demand exceeds supply, which pushes the price up. Above it there is a surplus because supply exceeds demand, which pushes the price down.

Feedback: The student correctly explains the concepts of shortage and surplus relative to the equilibrium price.

If the cost of production rises, producers supply less at every price, so the supply curve shifts to the left. The new equilibrium has a higher price and a lower quantity.

Feedback: The student correctly identifies that a rising cost of production shifts the supply curve to the left.

15 / 15 (100.0%)

Question 1

Explain how a simple electric circuit works and illustrate your explanation with a properly labelled circuit diagram showing a battery, switch, bulb, resistor, ammeter and voltmeter. Your answer should explain how the components are connected, the path followed by electric current, and how changing the resistance affects the current flowing through the circuit.

5 / 5

CORRECT

1 / 1

1.1 Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path

MODEL ANSWER

A properly labelled diagram would therefore show the battery connected to the switch, resistor, bulb and ammeter in a single closed loop

STUDENT WROTE

"The batery, swltch, resistor, bufb and ammeter are all conected in serles in one closed loop."

WHY THIS MARK

The student correctly identifies that the main components are connected in a closed series loop.

CORRECT

1 / 1

1.2 Correct placement of ammeter in series and voltmeter in parallel across the bulb

MODEL ANSWER

The ammeter must be connected in series because it measures the current flowing through the circuit. A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

STUDENT WROTE

"The ammeter must be in serles because it measures the currerit flowing through the circuit. The voltmeter is conected in paralel across the bufb because it measures the potentia1 difference between the two ends of the bufb."

WHY THIS MARK

The student correctly explains the placement and reasoning for both the ammeter and the voltmeter.

CORRECT

1 / 1

1.3 Correct explanation of current flow and the function of the main components

MODEL ANSWER

A simple electric circuit provides a closed path through which electric current can flow. The battery provides the potential difference that drives current through the circuit. The switch is used to open or close the circuit.

STUDENT WROTE

"An electric circuit is a closed conducting path through which currerit can flow. The batery provides the potential diference that drives the current. The swltch opens or clcses the path"

WHY THIS MARK

The student provides a correct explanation of the circuit's function and the roles of the battery and switch.

CORRECT

1 / 1

1.4 Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law

MODEL ANSWER

According to Ohm's law, $V = IR$. If the voltage of the battery remains constant and the resistance is increased, the current flowing through the circuit decreases. Conversely, reducing the resistance allows more current to flow.

STUDENT WROTE

"By Ohm's law $V = IR$. If the voltage stays the same and the resistarice is increased, the currerit through the circuit decreases. Reducing the resistarice lets rmore currerit flow."

WHY THIS MARK

The student correctly applies Ohm's law to explain the inverse relationship between resistance and current.

CORRECT

1 / 1

1.5 Clear, logically structured explanation with appropriate labels and current direction in the diagram

MODEL ANSWER

The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

STUDENT WROTE

"Conventional current flows from the positive terminal of the battery through the external circuit to the negative terminal, as shown by the arrow."

WHY THIS MARK

The student correctly describes the direction of conventional current and indicates that the diagram is labelled.

Question 2

"Technology has made information easier to access, but easier access to information does not necessarily mean better learning." Discuss this statement in detail. Write a well-structured response explaining whether you believe technology makes students better learners or makes them dependent on easily available answers. Support your argument with relevant examples, consider an opposing viewpoint, and conclude with your own reasoned opinion.

5 / 5**CORRECT****1 / 1**

2.1 Presents a clear position on whether/how technology affects learning

STUDENT WROTE

"In my opinion technology is neither good nor bad by itself. It depends on whether the student uses it to understand or only to copy."

WHY THIS MARK

The student presents a clear, nuanced position on the impact of technology on learning.

CORRECT**1 / 1**

2.2 Provides relevant and logically developed arguments supporting the position

STUDENT WROTE

"A student can watch a video or read an explanation until a difficult concept becomes clear, and can work at their own pace. However, easy access can also create dependence."

WHY THIS MARK

The student develops logical arguments covering both the benefits (self-pacing) and drawbacks (dependency) of technology.

CORRECT**1 / 1**

2.3 Recognises and meaningfully addresses an opposing viewpoint or limitation

STUDENT WROTE

"However, easy access can also create dependence. A student who looks up every answer finishes the homework but never learns to reason it out"

WHY THIS MARK

The student meaningfully addresses the opposing viewpoint regarding dependency and the loss of critical reasoning.

CORRECT**1 / 1**

2.4 Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims

STUDENT WROTE

"A student can watch a video or read an explanation until a difficult concept becomes clear... A student who looks up every answer finishes the homework but never learns to reason it out"

WHY THIS MARK

The student uses relevant examples (videos for concepts, copying homework) to support their reasoning.

CORRECT**1 / 1**

2.5 Provides a coherent conclusion that follows from the discussion, with clear overall communication

STUDENT WROTE

"It should support thinking, not replace it."

WHY THIS MARK

The student provides a concise and coherent conclusion that follows logically from the preceding discussion.

Question 3

The table below shows the relationship between the price of a product and the quantity demanded and supplied in a market. Price (Rs.) Quantity Demanded Quantity Supplied 10 100 20 20 80 40 30 60 60 40 40 80 50 20 100 Using the information provided, draw a properly labelled demand-and-supply graph and explain what the graph tells us about the market, including what happens when the market moves away from equilibrium and how an increase in the cost of production would affect the supply curve and the ...

5 / 5

CORRECT**1 / 1****3.1 Correctly plots and labels the demand and supply curves, with appropriate axes and direction****MODEL ANSWER**

The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis. The demand curve should slope downward from left to right... The supply curve should slope upward from left to right

STUDENT WROTE

"Quantity is on the horizontal axis and price on the vertical axis. The demand curve slopes downward and the supply curve slopes upward."

WHY THIS MARK

The student correctly describes the axes and the slopes of the demand and supply curves.

CORRECT**1 / 1****3.2 Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium****MODEL ANSWER**

The two curves intersect at a price of Rs.30 and a quantity of 60 units. This point represents the market equilibrium because at this price the quantity demanded is equal to the quantity supplied.

STUDENT WROTE

"They intersect at Rs 30 and 60 units, which is the equilibrium because quantity demanded equals quantity supplied there."

WHY THIS MARK

The student correctly identifies the equilibrium point and explains why it is the equilibrium.

CORRECT**1 / 1****3.3 Correctly explains shortage below equilibrium and surplus above equilibrium****MODEL ANSWER**

If the market price is below the equilibrium price, quantity demanded is greater than quantity supplied. This creates a shortage...

If the market price is above the equilibrium price, quantity supplied is greater than quantity demanded. This creates a surplus

STUDENT WROTE

"Below the equilibrium price there is a shortage because demand exceeds supply... Above it there is a surplus because supply exceeds demand"

WHY THIS MARK

The student correctly explains the concepts of shortage and surplus relative to the equilibrium price.

CORRECT**1 / 1****3.4 Correctly explains that increased production costs shift the supply curve left/upward****MODEL ANSWER**

If the cost of producing the product increases, production becomes less profitable at each existing price. Producers will therefore be willing to supply less at each price. The supply curve shifts to the left/upward

STUDENT WROTE

"If the cost of production rises, producers supply less at every price, so the supply curve shifts to the left."

WHY THIS MARK

The student correctly explains that an increase in production costs shifts the supply curve to the left.

CORRECT**1 / 1****3.5 Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph****MODEL ANSWER**

The new equilibrium would generally occur at a higher price and lower quantity, assuming demand remains unchanged.

STUDENT WROTE

"The new equilibrium has a higher price and a lower quantity."

WHY THIS MARK

The student correctly identifies the resulting change in equilibrium price and quantity.
